Honey pot ants

Honey pot ants are a kind of edible insects in desert regions in Australia. They are famous among the indigenous people there. Usually the worker bees harvest nectar from the flowers of the mulga tree. Then they carry it underground and feed it to specialized bees called 'Rotunds'. They are so lazy and their only job is to dangle upside down and eat.

After eating so much nectar, their abdomens swell up and the abdomen wall is stretched so thin that the honey can be seen inside. That is why they are called 'Honey pots'.

Not only as a food item but also Indigenous Australians use honey pot ants to treat sore throats and skin infections. The scientists say that, this honey is useful in producing medicine for the bacterial and fungal diseases too.
